

Beware the Dragon Ships

These ships are sailing up the Forth Estuary several times a week. They carry ethane, also called Natural Gas Liquids (NGL) to the INEOS petro-chemical plant at Grangemouth.

DO YOU KNOW

... one barrel of NGL has the explosive power of one ton of TNT? Each dragon ship carries the equivalent of 172,000 barrels.

DO YOU KNOW

... any leak from one of the tanks on a dragon ship would result in the colourless, odourless vapour spreading close to the surface until reaching a source of ignition, which would lead to an explosion with a radius of several miles?

Our Forth Against Unconventional Gas

We stopped fracking in Scotland

HELP STOP THESE DANGEROUS DRAGON SHIPS!

... David Attenborough is not the only person who can influence the powers that be, you too can help fight for a cleaner, safer, carbon free environment?

... with the publics' vision, Government support and trade union cooperation the plant at Grangemouth could convert to a dynamic centre for making clean, renewable, sustainable products?

... the UK and Scottish governments have declared war on unnecessary plastic following public outcry at the damage to the environment?

... one argument INEOS gives for importing fracked ethane is, "the need for the UK to ensure it has energy security"? **FACT!** Ethane is not used as fuel but to make plastic!

... INEOS is owned by Swiss based Jim Ratcliffe, a union bashing billionaire who has had millions of pounds of loans and subsidies from both the UK and Scottish governments?

... both INEOS and Range Resources have very dubious safety records? INEOS was rated 'poor' by the Scottish Environmental Protection Agency in 2016 and Range Resources were fined \$4.15 million in 2016.

... the people of Pennsylvania have been campaigning against fracking for years, just like the people of Scotland?

... fracking is now effectively banned in Scotland yet the Scottish Government allows INEOS to import this fracked gas from a company called Range Resources in Pennsylvania?
